

### Free-standing overhead systems

Waverley Glen free-standing overhead systems are everything free-standing systems were meant to be:

- they stand freely on the floor without support from floor-to-ceiling pressure posts
- they're collision resistant and don't require adjusting over time
- they're independent of ceiling type and wall type

The systems suit rental requirements as well as situations where ceiling or wall mounting is not possible or desirable. All free-standing systems are ideal for use with the Waverley Glen transportable or Griffin lift. Units are assembled with standard wrenches and Allan keys.

### Square 4-Post Area Covering System

#### Components

- 2 Support Rails
- 2 Support Rails with Trolleys
- 1 Gantry Rail
- 4 Posts w/ Leveling Feet

#### Specifications

This system is 7 feet high without the leveling feet.
